

SURVEY QUESTIONS

This table provides the text of each question followed by the number and percentage of respondents for each response category (excluding unknown and refused). Not all persons were asked all questions. For instance, only women were asked questions about mammography. As another example, the question “*Do you smoke now?*” was only asked of persons who reported having ever smoked at least 100 cigarettes in their lifetime. However, the denominator for this question has been adjusted for this table to represent the entire population, thereby providing the percentage of current smokers in the entire population rather than the percentage of smokers among those who had ever smoked at least 100 cigarettes. The correct denominator is provided parenthetically after the text of the question.

All responses in this survey are weighted (see technical notes). Because each respondent has a different statistical weight, the number of respondents will not match the weighted percentage. For instance, if 100 persons were asked a question, 50 persons could say “yes” representing 45%, and the other 50 persons could say “no” representing 55%. Unless otherwise stated, results are weighted to adults 18 years and older. Questions which pertain to households are weighted using a household weight, and questions which pertain to children are weighted using a child weight appropriate to the age group specified by the question. When a household or child weight was used, this is specified after the text of the question.
